

# Bennett

## 540 SERIES

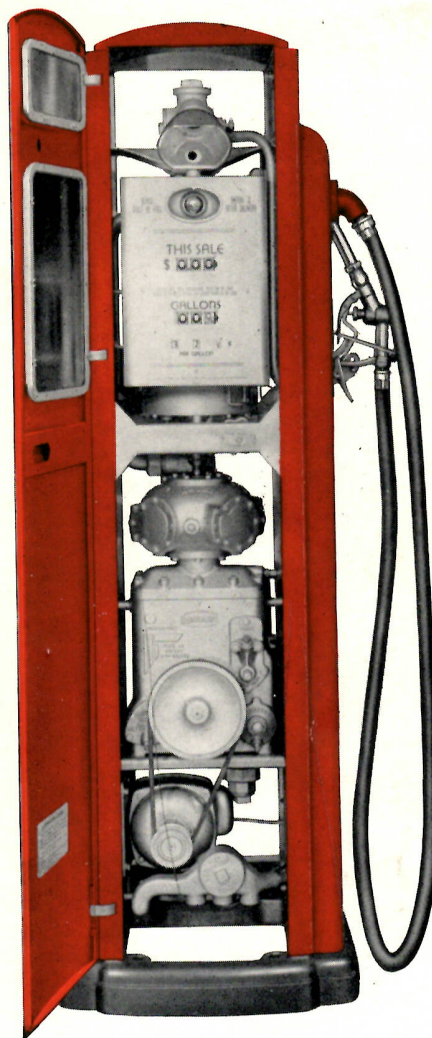

Pittsburgh Meter  
Optional

### PYRAMID CONSTRUCTION

The entire working assembly of the Series 540 Gasoline Pumps is completely independent of the frame and housing. All vital units are built into a single compact assembly. Wholly self-supporting and above and beyond the danger zone of accidental car bumper collision. Maintenance costs or expensive service interruptions are prevented. There are no more confusing pipe connections, flanges, platforms, clamps and bolts. With PYRAMID CONSTRUCTION the entire unit is clean cut, self contained, self-supporting and so compact that it is a marvel of modern engineering. This means greater operating efficiency, longer service life and reduced maintenance costs.

### CENTER-LINE ASSEMBLY

### GASOLINE PUMPS

### CENTER-LINE ASSEMBLY

CENTER-LINE ASSEMBLY is the PROFIT-LINE of MAINTENANCE ECONOMY. Through two, wide, full length, swing doors, front and rear, every bolt, nut and screw of the new BENNETT is accessible. No need to go through the time-consuming job of removing panels to make adjustments or repairs. No need to be a contortionist to service hard-to-get-at-parts. Instead every adjustment point—every essential part—is easily and instantly serviced. Gone are those inspection and servicing delays that mean profit losses. CENTER-LINE ASSEMBLY has changed upkeep expense into maintenance economy.
